

BHARATH MYSORE

Bothell, WA | +1 (425) 503-6839 | bharathkumarmn@hotmail.com

TECHNICAL LEADERSHIP PROFILE

Senior technical leader with 20+ years of experience spanning cloud storage, distributed systems, kernel and driver development, hardware validation, and developer tools. Sets technical direction for ambiguous, cross-team initiatives; aligns platform investments to reliability, scale, and customer outcomes; and carries critical programs from prototype through durable release.

LEADERSHIP STRENGTHS

Technical strategy and cross-team influence • Platform architecture and execution • Zero-to-one product delivery • Distributed storage and disaster recovery • Capacity efficiency and fault containment • Team formation and remote collaboration

PROFESSIONAL EXPERIENCE

Oracle Corporation | Jun 2016 - Present

Cloud Storage Platforms | Unified Storage, Block Storage, Marketplace, and Data Pipeline

- Set architecture and execution direction for core unified-storage capabilities serving object, block, and file workloads, including the replication layer shared across storage services.
- Drove cross-team platform initiatives spanning erasure coding for object storage, block-storage bring-up on the unified stack, migration from the legacy stack, and deep archival.
- Led cross-region replication and asynchronous volume-group replication from design through delivery, strengthening disaster-recovery capabilities for block-storage customers.
- Directed scale and availability improvements across the data path: expanded backup-backend capacity, introduced multi-process iSCSI serving, and re-architected networking to reduce hops and support more attached volumes.
- Led capacity-efficiency programs: cold-data compression reclaimed 20-30% of space; idle-volume backend optimization resulted in U.S. Patent 11,412,043; trimmed-block reclamation addressed 6-7% of unreferenced data.
- Raised platform resilience by refactoring the backend to contain failures by feature, volume, or device and automating failed-disk and host handling.
- Established and delivered a software-metering service from prototype to a public-facing, near-real-time Marketplace service.
- Helped redirect the team toward a data-processing service, contributing to the prototype and carrying the effort through internal release.

PROFESSIONAL EXPERIENCE (CONTINUED)

Microsoft Corporation | Sep 2005 - May 2016

Azure Storage

- Designed and implemented a library supporting a proof-of-concept Azure Storage backend infrastructure using RDMA.

Microsoft Corporation | Sep 2005 - May 2016

Visual Studio

- Led multiple debugger initiatives - Cluster Debugger for HPC/MPI, Parallel Debugger for concurrency, and GPU debugging for CUDA, OpenGL, and DirectX.
- Built and led a team of five local engineers and ten remote collaborators to deliver complex developer-tooling programs.

Microsoft Corporation | Sep 2005 - May 2016

HoloLens, Surface Hub/Kinect Tools, Xbox One

- Owned end-to-end depth-camera functionality on HoloLens from prototype through release.
- Designed drivers and tools for hardware design verification, and developed a proof of concept for Xbox 360 graphics emulation on Xbox One.

Microsoft Corporation | Sep 2005 - May 2016

Global Technical Support Center

- Served as a Windows OS, file-system, and disk subject-matter expert: led kernel-dump analysis, root-cause investigation, code reviews, and customer and engineering coordination through resolution.

Intel Technology India Private Limited | Mar 2002 - Sep 2005

Systems and Platform Software

- Designed validation tools for CPU cores and cache/memory subsystems, including Linux kernel programming and drivers for test cards and chipsets.
- Drove complex hardware and OS issues to closure through debugging, root-cause analysis, and targeted patches; developed network-card management and configuration software for Windows and Linux.

TECHNICAL FOUNDATION

Languages: C/C++, Java, Python, C# | Platforms: concurrent and parallel programming, gRPC, Folly, Boost, Terraform, Kubernetes, Docker, Helm, Prometheus, Apache Flink, ZooKeeper, iSCSI, Apache Kafka
