

BHARATH MYSORE

Bothell, WA | +1 (425) 503-6839 | bharathkumarmn@hotmail.com

TECHNICAL LEADERSHIP PROFILE

Senior technical leader with 20+ years of experience spanning cloud storage, distributed systems, kernel and driver development, hardware validation, and developer tools. Sets technical direction for ambiguous, cross-team initiatives; aligns platform investments to reliability, scale, and customer outcomes; and carries critical programs from prototype through durable release.

LEADERSHIP STRENGTHS

Technical strategy and cross-team influence • Platform architecture and execution • Zero-to-one product delivery • Distributed storage and disaster recovery • Capacity efficiency and fault containment • Team formation and remote collaboration

Technical Expertise: C/C++, Java, Python, C#; file systems, block/object storage, disks, replication, snapshots, archival, iSCSI, checkpointing, WAL, recovery, fault containment; kernel/user-mode software, device drivers, hardware bring-up, embedded systems; Terraform, gRPC, ZooKeeper.

Education: B.E., Computer Science and Engineering, Mangalore University

PROFESSIONAL EXPERIENCE

Oracle Corporation | Jun 2016 - Present

Cloud Storage Platforms | Unified Storage, Block Storage

- Set architecture and execution direction for unified-storage capabilities serving object, block, and file workloads, including the replication layer shared across storage services.
- Drove cross-team initiatives spanning erasure coding, block-storage bring-up and migration, and deep archival.
- Led cross-region and asynchronous volume-group replication from design through delivery, strengthening disaster-recovery capabilities.
- Directed scale and availability improvements: scaled backup for our growth, introduced multi-process iSCSI serving, and re-architected networking to reduce hops and support more attached volumes.
- Led capacity and resilience programs: cold-data compression reclaimed 20-30% of space; idle-volume optimization resulted in U.S. Patent 11,412,043; trimmed-block reclamation addressed 6-7% of unreferenced data; refactored fault containment and automated failed disk/host handling.

Microsoft Corporation | Sep 2005 - May 2016

- For Azure Storage, Designed an RDMA library for a proof-of-concept backend.
- HoloLens, owned end-to-end depth-camera functionality from prototype through release.
- Visual Studio: Lead Cluster, Parallel, and GPU debugger test teams; built and led local and remote teams.
- XBox: Designed drivers and tools for hardware design verification, and developed a proof of concept for Xbox 360 graphics emulation on Xbox One.
- Windows OS: Served as Windows OS, file-system, and disk SME, leading kernel-dump analysis and root-cause resolution with customers and engineering teams.

Intel Technology India Private Limited | Mar 2002 - Sep 2005

- Designed validation tools for CPU cores and cache/memory subsystems, including Linux kernel programming and drivers for test cards and chipsets.
- Drove complex hardware and OS issues to closure through debugging, root-cause analysis, and targeted patches; developed network-card management and configuration software for Windows and Linux.

Infineon Technologies (formerly Siemens Semiconductor) | Mar 2000 - Mar 2002

- Developed control software for telephone-exchange cards used to configure, monitor, and control line operations.
- Built systems-level software at the hardware and telecommunications interface, supporting reliable configuration and operational control of exchange-line functions.
